DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12-18-06 has been entered.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 6 to 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese patent 408081738.
- 4. The English abstract of JP'738 discloses an induction hardened steel having constituents whose wt% ranges overlap those recited by the claims; such overlap renders applicant's composition prima facie obvious because it would be obvious for one skilled in the art to select the claimed alloy wt% ranges over the broader disclosure since similar properties, high bearing fatigue strength and machinability, are taught. See MPEP 2144.05.

Application/Control Number: 10/828,662

Art Unit: 1742

5. More specifically, JP'738 alloy 4 on page 228 closely meets the claimed composition and when calculated has a Ceq=0.91 (closely approximates claimed Ceq range of 0.75 to 0.90).

6. Claims 6 to 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fujimura et al (US Patent 6,372,057) or Japanese patent 410317095 for the reasons set forth in the previous office action dated 6-13-06.

Response to Arguments

- 7. Applicant's arguments filed 12-18-06 have been fully considered but they are not persuasive.
- 8. It was stated that newly amended claims recite "consisting of" which would preclude the addition of aluminum taught by the Fujimora or JP'095. It is the examiner's position that prior art alloy contains small amounts of AI to further enhance fracture toughness by avoiding the formation of inclusions. To omit AI with the consequent loss of its known function, as applicant has done, would not be a patentable distinction.
- 9. Applicant argued that Fujimora alloy does not contain V. It is the examiner's position that Fujimora in claim 2 of column 6 discloses up to 0.10%V which overlaps with present invention V range of 0.01 to 0.15%.
- 10. With respect of JP'095, it was stated that claims recite 0.5 to 1.0% Mn whereas prior art alloy contains an upper Mn limit of 1.5%. It is the examiner's position that JP'095 teaches a broad Mn range of 0.1 to 1.5% which overlaps and therefore suggest the claimed Mn range of 0.5 to 1.0%. Since applicant has not demonstrated (e.g. by

Art Unit: 1742

comparative test data) that the more narrowly claimed Mn range is somehow critical or productive of new and unexpected results, then claims would not patentably distinguish over prior art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Deborah Yee whose telephone number is 571-27211253. The examiner can normally be reached on monday-friday 6:00am-2:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on 571-272-1244. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
